

Hosting Your Success

Managed Dedicated Servers

Our experienced staff will take care of your server management maintaining server availability and dealing with critical incidents.

Product Overview

Three words: peace of mind. Host1Plus has been a well-established hardware distributor partner for years. We are taking this further by taking care of hardware customization, ordering, logistics and maintenance, so that you can concentrate on your business growth.

Managed Dedicated Servers plans combine proactive monitoring, security, management, backup, reporting and expert support. With Managed Dedicated Servers everything is dedicated, all the resources belong to you and can be used when required.

With real-time server monitoring and management applications, we make sure your services perform at their peak. Our team fast-tracks your requests and keeps you updated with relevant information. Server management includes routine optimization and system maintenance.

- › Custom configuration, installation and maintenance.
- › Performance analysis and optimization.

Locations

- › Chicago, US
- › Los Angeles, US
- › São Paulo, BR
- › Frankfurt, DE
- › Johannesburg, ZA

Use Cases

Enterprises

When you are in need of a disaster recovery site, building a private cloud solution or require your data to be well connected and secure close to a specific market, running on a custom specified hardware, this solution definitely meets your enterprise needs.

With full virtualization and Trusted Compute support, Host1Plus Managed Dedicated Servers are opening the doors to global markets which otherwise would be too cost prohibitive to get into.

Hosting Companies

Open up new locations for your clients without worrying about total cost of ownership or maintenance costs. Take control of your stack while having an ultimate control programmatically via API.

Data Intelligence and Security

Driven by data protection regulations or internal corporate security policies? No problem. Host1Plus Managed Dedicated servers is a shared-nothing solution, where you have full control of data processing and storage stacks.
