Lixux OU with Host1Plus: Business case

"At first, I didn't know if your VPS servers will be powerful enough for our clients, but Host1Plus quickly proven to be a reliable partner. We were happy with service implementation and IP diversity. You provided great support and uptime. Most importantly, we can easily control our service, reboot and reinstall directly from your client panel which is very good."

CUSTOMER SINCE

2014

Lixux OU is a company based in Tallin. They provide Proxy servers and VPS services worldwide since 2011.

Challenges

Since then, they are aiming for growth on a much bigger scale. To keep up with growing demand Lixux OU had to upscale their resources accordingly.

Having a business goal to keep server uptime at 100% while staying cost-efficient meant that choosing the right partner for the job will be challenge itself. Luckily, Host1Plus were up for the job and proved to be successful.

Objectives

The scope of work included the integration of enterprise services which is powered by the virtual bare metal solution. For Lixux OU it was critical component in transforming their infrastructure.

Results

Host1Plus provided cost-efficient solution built on top of optimized open-source KVM hypervisor and in-house developed automation. This alone allowed Lixux OU to seamlessly integrate virtual machine lifecycle management into their own processes. From now on, Lixux OU are able to scale both horizontally and vertically in seconds, while retaining strong security and performance.
